

Business Performance Accelerators Talent Competency Application™ Module Set Up Index

The BKC VEM Talent Competency™ Secure Cloud Skills Database Application provides the technology infrastructure that supports the implementation of our Talent and Process Capabilities. It enables you to define the attributes required to undertake work assignments as well as the courses or certifications required for regulatory or other compliance. You can associate both attributes and courses with resources.

Resource calendars can be searched to enable you to find resources capable of undertaking an assignment or available for training.
